

FECAL SLUDGE MANAGEMENT FEASIBILITY STUDY IN THREE CITIES: KISII, EMBU AND NYAHURURU

PHASE 1: FECAL SLUDGE MANAGEMENT BASELINE ASSESSMENT

GWASCO, EWASCO, and NYAHUWASCO selected and partnered with Sanivation Ltd to support in improving Fecal Sludge Management in Kisii & Nyamira, Embu, and Nyahururu towns respectively. GWASCO's Managing Director (MD) Mr. Elvis Masiga, EWASCO's MD Eng. Felix Mutuura, and NYAHUWASCO's Eng. Peter Mwangi, are all excited to kickoff this exercise and be the leaders in sanitation service provision. Conforming to this partnership, Sanivation Ltd will be conducting feasibility studies to **verify that Fecal Sludge Treatment Plants (FSTPs) concept is technically, economically, financially, and environmentally feasible to implement the works and operate them.**

About this Phase

The first phase of this exercise will be to conduct a thorough baseline assessment of the sanitation and fecal sludge management situation. This phase will look at existing government mandates and capacities, existing plans and priorities of the county and utility, service gap analysis based on what's existing and what's needed, and an initial proposal of solutions and respective costs. This will be a combination of desk-based work and stakeholder engagement, as well as primary data collection through site visits.

We are looking forward to working with the utilities to conduct the feasibility study, in addition to utilizing our knowledge and experience in the sector.
